

The Louisville, Ky. plant produces one of Arkema's signature products, Plexiglas® acrylic resin. It's a name you may recognize as the standard in acrylic sheet. Our acrylic molding resin is used in automotive tail light lenses, backlit signage, lighting applications, dashboard panels, medical equipment and much more. The Louisville plant can produce and ship a resin so clean and pure that it is qualified for use as a layer in smartphone screens. The resin is also used in the manufacturing of Plexiglas® acrylic sheet in North America and Latin America and Altuglas® acrylic sheet in the rest of the world. We take pride in producing materials that have excellent flexibility and optical clarity and exceptional weather resistance. Our products resist discoloration and molded parts can be drilled, machined, engraved or embossed. Our product line offers a variety of characteristics, enabling customers to choose one that is highly suitable for their application. In 2013, we added two production lines that produce extruded acrylic sheet. That product is used in many markets including signs, point of purchase displays, lighting and store fixtures.

Community involvement

- ⇨ Hold Christmas charity drives and community food drives
- ⇨ The site participates in the local **Community Advisory Panel** to promote industry, give back to the neighborhoods and clean up.
- ⇨ The site sponsors the **Person of the Year** award and monetarily supports the group with others.
